VWAP Cross-Platform Explainer & Tutorial

NinjaTrader 8 | TradingView Pine Script | Video Education

NinjaScript/C# | Pine Script v6 | VWAP + Bands | Video

Seiichi Tanaka Algo Trading Developer | 30yr STEM Educator | Rising Talent

KEY INSIGHT

VWAP calculations differ between NinjaTrader and TradingView due to session reset handling, volume aggregation, and band formulas.

I'll bridge BOTH so your community understands the WHY.

Platform VWAP Comparison

VWAP Calculation	Tick-level volume weighting	Bar-level aggregation
Session Reset	Configurable (RTH/ETH)	Auto-reset at session open
Band Deviation	Fixed std dev (1, 2, 3)	Customizable multiplier
Custom VWAP	NinjaScript C# indicator	Pine Script v5/v6
Drysdale Bands	Custom implementation	Custom implementation

Technical Deep Dive

How VWAP implementations differ across platforms

01 TradingView / Pine Script v6

```
// Pine Script v6 - Custom VWAP + Drysdale Bands
indicator('VWAP + Drysdale Bands', overlay=true)

vwapValue = ta.vwap(hlc3)

length = input.int(20, 'Band Lookback')
mult1  = input.float(1.0, 'Band 1 Multiplier')
mult2  = input.float(2.0, 'Band 2 Multiplier')
dev    = ta.stdev(close - vwapValue, length)

plot(vwapValue, 'VWAP', color.blue, 2)
plot(vwapValue + dev*mult1, '+1SD', color.green)
plot(vwapValue - dev*mult1, '-1SD', color.green)
```

ta.vwap() auto-resets at session boundary. Drysdale bands use rolling deviation.

02 NinjaTrader 8 / NinjaScript C#

```
// NinjaScript C# - Custom VWAP with Bands
protected override void OnBarUpdate()
{
    double tp = (High[0]+Low[0]+Close[0]) / 3;
    cumVolume += Volume[0];
    cumTPxVol += tp * Volume[0];

    double vwap = cumTPxVol / cumVolume;
    VWAPPlot[0] = vwap;

    // Configurable deviation bands
    double dev = StdDev(Close, BandPeriod)[0];
    UpperBand[0] = vwap + dev * BandMult;
}
```

Manual session reset + cumulative state. More control, more complexity.

Why Both Platforms Matter

TradingView: Quick setup, easy sharing, great for visual learners
NinjaTrader: Tick-level precision, full session control, live ES trading

5-Step Delivery Plan

1 NinjaTrader VWAP Audit

DAY 1-2

Review built-in VWAP, implement custom Drysdale-style bands,
test session reset behavior (RTH vs ETH) on ES futures.

2 TradingView Pine Script Build

DAY 2-3

Create Pine v6 VWAP indicator with matching band logic.
Ensure calculation parity and document platform differences.

3 Cross-Platform Comparison

DAY 3-4

Same instrument, same timeframe, both platforms side-by-side.
Identify and explain WHY deviation points exist.

4 Video Explainer Production

DAY 4-7

Screen recording + voiceover on both platforms.
Visual annotations showing band calculations and trade examples.

5 Documentation & Q&A

ONGOING

Written setup guide for both platforms.
FAQ document + ongoing Discord support availability.

Live Trading Track Record

STRATEGY	WIN%	TRADES	PROFIT	PLATFORM	VERIFIED
QQE x HMA v6.0	58%	1,850+	+$18,000	MT5/TV	YouTube
QQE Showtime v3.5	64%	380+	+$4,500	MT5	YouTube
Babji King (ES)	56%	120+	+$1,800	TradingView	Public

Why Me for This Job

TV — **12 Published Pine Scripts, 679+ Boosts**
Battle-tested by the TradingView community. I know VWAP inside out.

NT — **NinjaScript C# Experience**
Custom indicators, session handling, data series architecture.

YT — **2,000+ YouTube Subscribers**
I already create trading education videos with clear explanations.

30 — **30 Years STEM Teaching**
I make complex concepts intuitive for any skill level.

5A — **5AI Research Depth**
Claude / Gemini / Grok for deep platform analysis and verification.

Ready to make VWAP crystal clear for your Discord community.
